WORKSHEET · SCRATCH (GR 6–8) INTERMEDIATE: DATA & SIMULATIONS

Lesson 4: Procedures with Inputs

Module 2 | 45 minutes | Procedures and parameters | Grades 6–8 · ages 11–14

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. procedure / function ___ A. Using (running) a procedure.
b. parameter ___ B. The value passed when calling.
c. argument ___ C. The input name in the definition.
d. call ___ D. A named, reusable block of code.

2. Plan your code

Before you build it: Polygon procedure: define polygon (sides) that draws a regular polygon with 40-step sides. On the flag, pen down and call polygon (3), polygon (4) and polygon (5). Write or draw the blocks you will use.

3. Match the word to the example in polygon (sides) … polygon (5)

Draw a line from each word to its match.

a. procedure ..... A. the define polygon script
b. parameter ..... B. 5
c. argument ..... C. sides
d. definition ..... D. polygon

4. Plan your code

Before you build it: Flower: using your polygon procedure, repeat 6 times: call polygon (6) and turn right 60. That makes a hexagon flower. Write or draw the blocks you will use.

5. Functions in Python

What does this Python print? Code: def greet(name): ↵ print("Hi " + name) ↵ ↵ greet("Sam") ↵ greet("Lee")

a. A. Hi Sam then Hi Lee
b. B. Hi name twice
c. C. Nothing — greet is never called

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can define a procedure with a parameter.
☐ I can call it with different arguments.
☐ I can explain parameter vs argument.
