Lesson 7: Operators: Maths in Code

Module 3 | 45 minutes | Operators and comparison | Grades 3–5 · ages 8–10

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. operator ___ A. Put text and numbers together.
b. expression ___ B. Check if two values are equal, bigger or smaller.
c. compare ___ C. A calculation, like (6) * (7).
d. join ___ D. A block that does maths or joins text.

2. Plan your code

Before you build it: Make a times-table checker: ask “What is 6 × 7?”. If the answer is 42 say “Correct!”, else say “Not quite: it is 42.”. Write or draw the blocks you will use.

3. Inner blocks first

What does the sprite say? Code: say ((10) - ((2) * (3)))

a. A. 4
b. B. 24
c. C. 7

4. Plan your code

Before you build it: Build a calculator: ask for a first number and store it in a variable called first; ask for a second number; then say “Total: ” joined with first + answer. Write or draw the blocks you will use.

5. Explain your thinking

Explain why we store the first answer in a variable before asking the second question.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

- ☐ I can use operator blocks to calculate.
- ☐ I can check a typed answer with =.
- ☐ I can save an answer in a variable to use later.
