WORKSHEET · SCRATCH (GR 6–8) BEGINNER: CODE FOUNDATIONS

Lesson 2: Events and Parallel Scripts

Module 1 | 45 minutes | Event-driven programming | Grades 6–8 · ages 11–14

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. event ___ A. A message sent to every sprite.
b. hat block ___ B. Running at the same time.
c. parallel ___ C. A block that starts a script when its event happens.
d. broadcast ___ D. Something that happens, such as a click or key press.

2. Plan your code

Before you build it: Drone controls: four arrow-key scripts move the Drone 10 steps (right/left change x, up/down change y). The flag puts it back at 0, 0. Write or draw the blocks you will use.

3. Plan your code

Before you build it: Party signal: when the Drone is clicked, it broadcasts “party”. The Robot receives “party”, says “Party time!” and changes its colour effect by 50. Write or draw the blocks you will use.

4. Which event starts each script?

Write each item in the right group: Green flag / Key press / Sprite click / Broadcast.

a. Reset the game at the start → _____
b. Jump when space is pressed → _____
c. Open a menu when a button sprite is tapped → _____
d. All enemies freeze when “pause” is sent → _____
e. Move left with the arrow → _____

5. Explain your thinking

Name an app you use. Describe two events it waits for and what happens when each one occurs.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can use event hats to respond to users.
☐ I can run scripts in parallel.
☐ I can make sprites communicate with broadcasts.
