LESSON PLAN · SCRATCH (GR 6–8) BEGINNER: CODE FOUNDATIONS

Lesson 3: Project: Interactive Poster

Module 1 | 50 minutes | Project: events | Grades 6–8 · ages 11–14

Objective: Plan, build and test an interactive poster where sprites respond to clicks, keys and broadcasts with motion, sound and effects.

Success criteria

- My poster uses click, flag and broadcast events.
- Every sprite reacts with motion, sound or effects.
- I tested it with a user and improved it.

Key vocabulary

- **interaction**: A way the user can make something happen.
- **storyboard**: A sketch plan of what happens.
- **user testing**: Watching someone use your program.

You will need

- Projector with Kitabash (lesson video, Code Lab)
- Devices: 1 per learner or pair
- Printed worksheet (optional)
- Printed project brief

Timed lesson plan (50 min)

Time	Stage	What happens
5 min	**Warm-up (unplugged)**	Storyboard (5 min): sketch your poster with arrows labelled with events.
5 min	**Watch & plan**	Play the project video; learners plan on the project brief.
25 min	**Build**	Build-along steps, then Match the event to the reaction it should trigger. Check in halfway: everyone has something working.
7 min	**Test & peer feedback**	Swap and test each other's work: two stars and a wish.
8 min	**Improve & submit**	Improve one thing; Project: Interactive Poster.

Unplugged warm-up

Storyboard (5 min): sketch your poster with arrows labelled with events.

Teaching the idea

Applies event-driven design: each sprite maps events to reactions; broadcasts coordinate; the flag resets state. Emphasise user testing and discoverability.

Analogy: A museum exhibit: press a button, something happens.

Live demo: Show a finished poster; let a learner explore while the class notes each event and reaction.

Questions to ask

Ask	Listen for
What event starts each reaction?	Click, key, or broadcast.
How does your poster reset?	Green-flag scripts.
What did your tester miss?	Discoverability feedback.

Differentiation

Support
Two sprites plus a title; reuse the same click pattern.

Stretch
Add a quiz sprite that asks a question about the topic.

Common misconceptions

Misconception	How to fix it
One script per sprite is enough	Sprites usually need reset + reaction scripts.
Users will find every interaction	Add hints like “click me!”.

Assessment

Project rubric (also on the project brief):

Criterion	1 · Beginning	2 · Developing	3 · Secure	4 · Excellent
Events	None work	Some clicks	Every sprite reacts; flag resets	Rich use of click, key and broadcast
Content	No topic	Few facts	Accurate, clear facts	Engaging, well-researched facts
Media	None	Some motion	Motion plus sound or effects	Polished animation and sound
Design	Confusing	Usable	Clear layout with hints	Delightful and easy to explore

Testing & reflection	Not tested	Self-tested	User-tested; change explained	Several user-driven changes explained

Exit ticket
One improvement you made after user testing.

Homework
Show your poster to someone at home and note what they clicked first.

Answer key — Kitabash activities

1. Match the event to the reaction it should trigger (perform · matching)

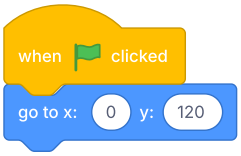

Title clicked → Broadcast “start” to everyone · Animal clicked → Say a fact about it · Space key → Play a sound · Green flag → Reset positions

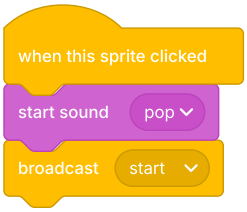

2. Project: Interactive Poster (probe · code lab)

Goals checked: 3+ sprites · Every sprite reacts to a click · A broadcast links sprites · Sound or effects · Resets on the flag

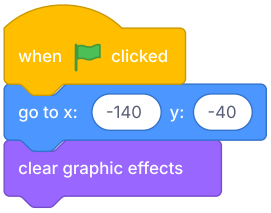

Example project:

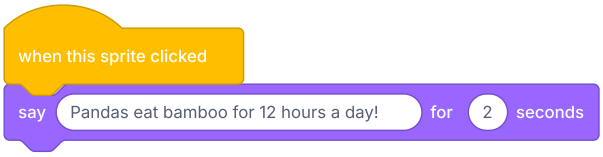

Title

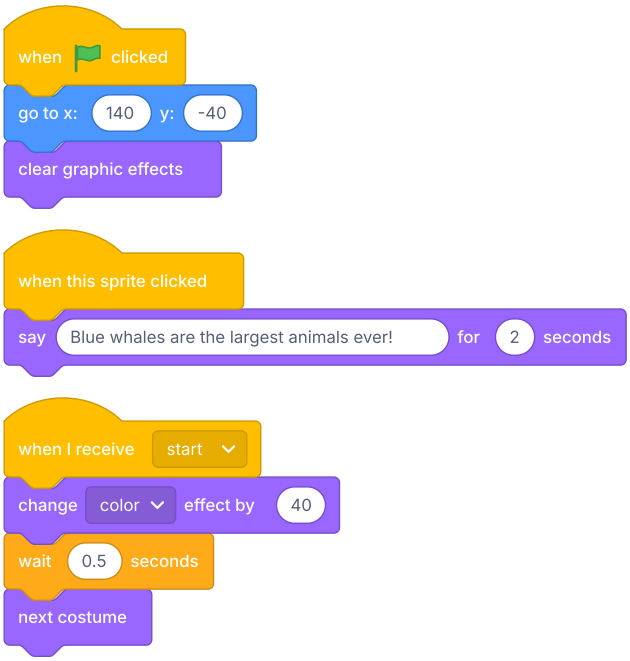

Fact1

Fact2

Answer key — worksheet

1. **Key words:** interaction = A way the user can make something happen. · storyboard = A sketch plan of what happens. · user testing = Watching someone use your program.
2. **Match the event to the reaction it should trigger:** Title clicked → Broadcast “start” to everyone · Animal clicked → Say a fact about it · Space key → Play a sound · Green flag → Reset positions
3. **My plan:** A clear plan that covers every requirement.
4. **Checklist:** All requirements met.
5. **Two stars and a wish:** Kind, specific feedback and an improvement.
