Lesson 2: Clones with Personality

Module 1 | 45 minutes | Clones + variables and sensing | Grades 3–5 · ages 9–11

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. collision ___ A. Give something a chance-based value.
b. polling ___ B. Checking something again and again in a loop.
c. randomise ___ C. When two sprites touch.

2. Plan your code

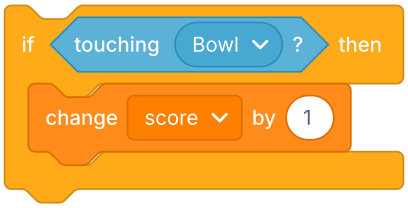

Before you build it: Smooth controls: when the flag is clicked, forever — if the right arrow is pressed, change x by 8; if the left arrow is pressed, change x by -8. Write or draw the blocks you will use.

3. Plan your code

Before you build it: Catch the stars: the Star makes a clone every 0.5 s; each clone falls from a random x. If a clone touches the Bowl, change score by 1 and delete the clone. Score starts at 0. Write or draw the blocks you will use.

4. Debug it

Stars are counted many times when caught. What is missing? Circle one.

a. A. “delete this clone” after changing the score
b. B. A second “change score by 1”
c. C. A “wait 1 second” before the if

5. Explain your thinking

How would you make your catching game get harder over time? Describe the variable you would use and where it changes.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can make smooth player controls.
☐ I can give clones random differences.
☐ I can detect when a clone touches the player.
